

# Wet separator **DUSTOMAT**<sub>HYDRO</sub>

for use in grinding, brushing and polishing

The wet separators of the DUSTOMAT HYDRO series are used in work processes **with flying sparks or for the extraction of highly flammable substances**. They are suitable for single and multi-station extraction systems for metallic dusts, such as during grinding, brushing and polishing.

The **innovative water separation technology** safely binds **over 98,7 %** of the extracted dusts and sparks in water, even with the smallest particle fractions of  $\geq 15 \mu\text{m}$ . The **downstream dry filter system (separation efficiency up to  $\geq 99.995 \%$ )** is therefore low-wear and thus reduces follow-up costs. The filter system can be configured individually.

## Your Benefits

- » High separation efficiency thanks to multi-stage filtration (up to  $\geq 99.995 \%$ )
- » Highly effective water separation (separation efficiency of 98.7 % for particle size  $\geq 15 \mu\text{m}$ ) protects downstream dry filters
- » High extraction efficiency for optimum results
- » Heating cost savings through optional recirculation operation
- » Economical water consumption by means of water level control
- » Low-noise system operation due to sound-optimised design
- » ATEX compliant
- » Easy to operate thanks to convenient touch display

**ESTA  
Extraction Technology**

ESTA extraction technology has provided comprehensive solutions for all application areas for more than 50 years. From single devices for a wide range of application purposes to complex extraction systems – we ensure a clean working environment at all times. This protects machines, benefits your employees' health and lays the groundwork for efficient and quality-oriented working.
